

Six-Class Latent Class Model: Consumer Profiles for Used BEV Battery Attributes

WTP in \$1,000 USD computed as $\text{beta_attr} / (-\text{beta_price})$. Piecewise linear range and range loss. WTP significance bounded by the less significant of (attribute, price). Bar lengths capped at $-\$120k$ for display; ¶ indicates truncation with actual value shown. Class 1 has a marginally significant price coefficient.
