

Highlights

- First WTP estimates for battery-health attributes in the U.S. used BEV market
- Range valued at \$11,070 per 100 mi; degradation penalized \$980 per pct-pt/yr
- Pack- and cell-level battery refurbishment each reduce WTP by over \$4,000
- Six consumer segments differ in battery-health sensitivity and buyer characteristics
- Battery cost and warranty disclosure does not reduce market opt-out rates
